

New firmware ([ulmage-ip01-v383.img](#)) for IP01/IP01p has been released.

In this release you will find:

- improved FAX stack
- deny/permit options in the GUI for better PBX security
- Improved FXS/FXO/SIP status indications in the GUI
- DynDNS options implemented in the GUI

It is always a good idea to BACKUP your configuration files and custom voice prompts (if any) before upgrading!

Firmware you can find at the download section of the site
